EASYINPUT

RELEASE 4.X NEW FEATURES

VERSION 4.XX

ODATA SCRIPT FOR S4 HANA SYSTEMS

User change integrated with password changing

Many minor improvements

Quicker data checking and mass data reading

Improved mass installation

Placing data read from an SAP system on a separate worksheet

ODATA SCRIPT FOR S4 HANA SYSTEMS

In S4 HANA systems OData is the primary solution for data Exchange.

It is used for:

- data reporting (hundreds of predefined services)
- data processing (all new SAP Fiori transactions use OData)
- data interfacing (new standard APIs are based on OData)

EXECUTE ONLY AUTHORIZATION

Users can be divided into execute only group and developer group

- If somebody wants only administrators to be able to develop EasyInput scripts, then other users can be granted "execute only" (E) authorization. Such users will not be able to create new EasyInput workbooks, open templates delivered with installation, nor use change functions on existing workbooks.
- If needed the "execute only" users can be given access to shared template folder with EasyInput workbooks released for execution by administrators.

EASIER MASS INSTALLATION

LICENSES AND CONFIGURATION AUTOMATIC UPLOAD

- License and configuration files can be put into the setup folder in order to be automatically uploaded on the end user workstation when installing EasyInput
- New functionality to export/ import configuration from file
- Also with EasyInput updates there is the possibility to update licenses or configuration entries

MANY MINOR IMPROVEMENTS

- more SAP systems can be licensed at the same time
- better performance
- better messaging
- better exception handling
- many other minor improvements...

KRZYSZTOF SIWIEC
